Mulching the Vegetable Garden.

The first of the season's work in the vegetable garden is the mulching of the beds. This is a very important operation, and one which should not be neglected. The purpose of mulching is to keep the soil moist, to prevent the growth of weeds, and to keep the soil warm. There are many different materials which can be used for mulch, but the best is probably straw or hay. This should be applied in a layer about two inches thick. It should be applied as soon as the soil is warm, and before the plants are set out. This will help to keep the soil moist, and will prevent the growth of weeds. It will also help to keep the soil warm, and will help to keep the plants from getting too hot. This is a very important operation, and one which should not be neglected.
